About Acrux:

Acrux (ASX: ACR) has spent 25 years building deep expertise in transdermal and topical drug delivery. We're now executing a focused strategy to address women's health through hormone replacement therapies. This is supported by a diversified portfolio of topical generic pharmaceuticals, already commercialised in the US market.

Disclaimer

This presentation contains forward-looking statements which are identified by words such as 'may', 'could', 'believes', 'estimates', 'expects', or 'intends' and other similar words that involve risks and uncertainties. These statements are based on an assessment of present economic and operating conditions, and on a number of assumptions regarding future events and actions that, as at the date of this presentation, are reasonably expected to take place. Actual results could differ materially depending on factors such as the availability of resources, the results of non-clinical and clinical studies, the timing and effects of regulatory actions, the strength of competition, the outcome of legal proceedings and the effectiveness of patent protection.

Such forward-looking statements are not guarantees of future performance and involve known and unknown risks, uncertainties, assumptions and other important factors, many of which are beyond the control of our Company, the Directors and our management.

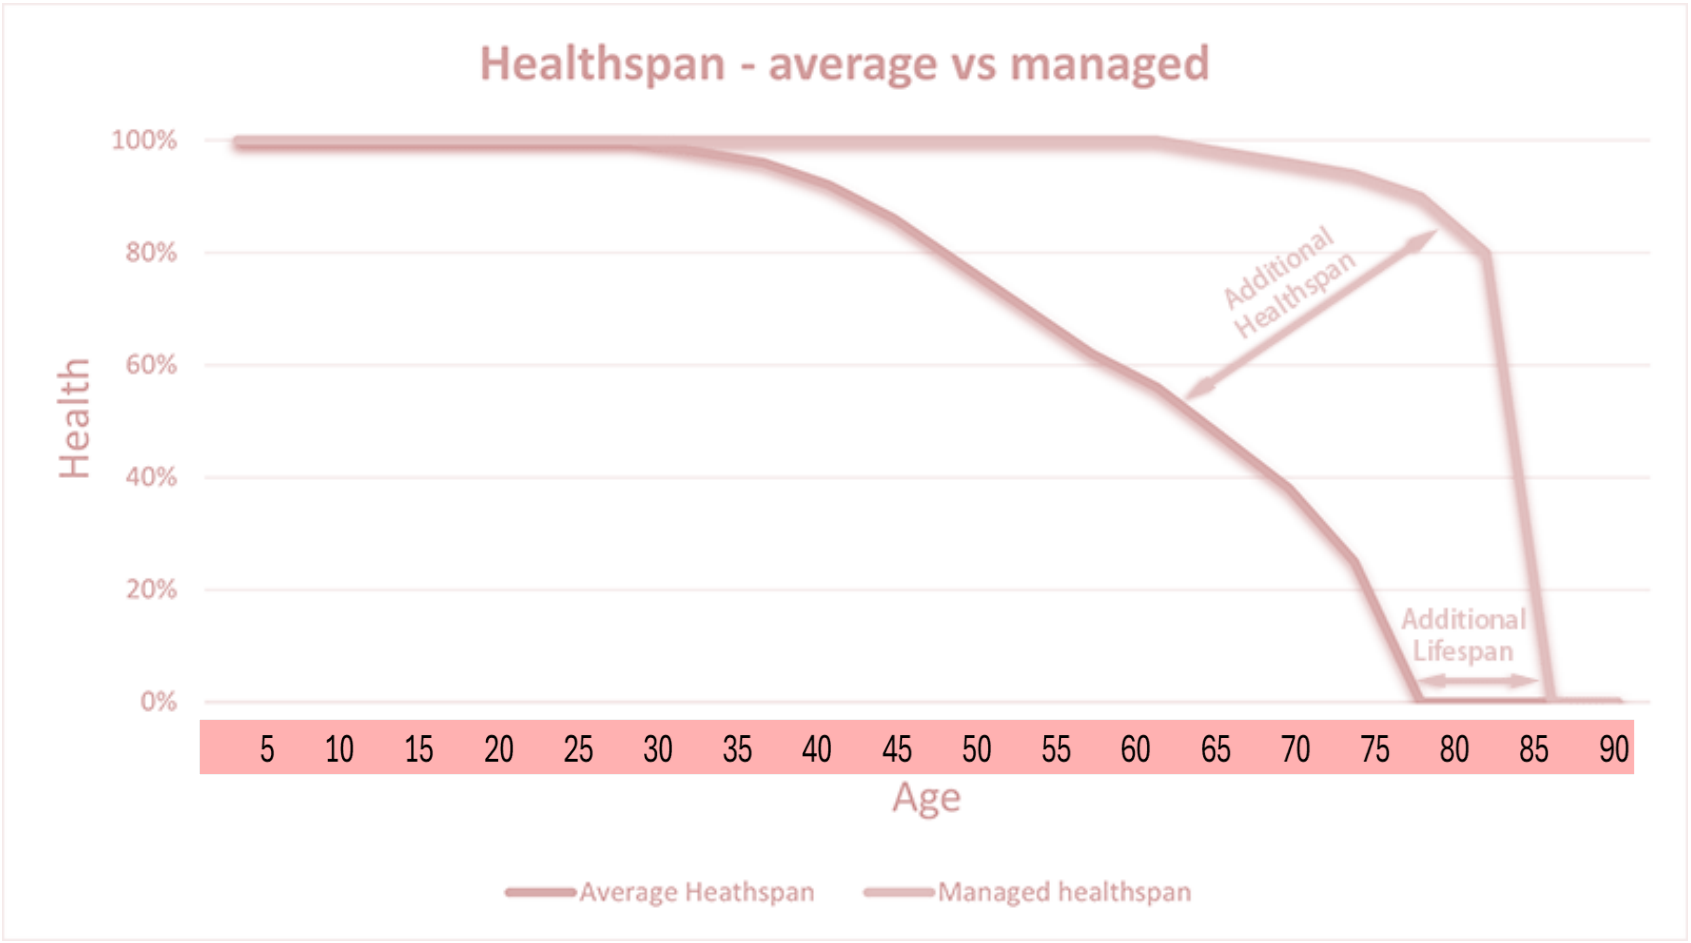

We cannot and do not give any assurance that the results, performance or achievements expressed or implied by the forward-looking statements contained in this presentation will actually occur and investors are cautioned not to place undue reliance on these forward-looking statements.

We have no intention to update or revise forward-looking statements, or to publish prospective financial information in the future, regardless of whether new information, future events or any other factors affect the information contained in this presentation, except where required by law and under our continuous disclosure obligations.

These forward-looking statements are subject to various risk factors that could cause our actual results to differ materially from the results expressed or anticipated in these statements.

HSDD impacts more than desire

5

For personal use only

It touches every
part of a
women's well
being

SEXUAL HEALTH

Desire – Intimacy - Satisfaction

RELATIONSHIP HEALTH

Connection – Communication - Closeness

EMMOTIONAL WELL-BEING

Mood – Stress – Mental wellness

QUALITY OF LIFE

Fulfilment – Happiness – Life satisfaction

SELF CONFIDENCE

Body image – Self esteem – Feeling like yourself

Addressing HSDD can help women reclaim their well-being - inside and out

Professor Susan R Davis
AO, MBBS FRACP PhD FAHMS

- Head of the Monash Women's Health Research program.
- Fellow and council member of the Australian Academy of Health and Medical Sciences.
- Advisor to the NHS Menopause Improvement Program Steering Committee.
- Author of the 2019 Global Consensus Position Statement on the Use of Testosterone Therapy for Women. ^

“

Testosterone is not simply a male hormone but is also **an important hormone in women**. Low sexual desire is the most prevalent sexual concern amongst women. When sufficient to cause personal distress women are considered as having hypoactive sexual desire dysfunction or HSDD.

There is irrefutable evidence that testosterone therapy in doses that result in blood levels within the physiological range for premenopausal women **improves** sexual desire, arousal, orgasm and sexual self-image and **reduces** personal distress in postmenopausal women with HSDD.

Acrux's Testosterone* MDTs# has the advantages of acting as a "**patchless**" patch with good pharmacokinetic evidence of absorption

”

Global Consensus Position Statement on the Use of Testosterone Therapy for Women. The Journal of Clinical Endocrinology & Metabolism. Vol 104(10), pp. 4660-4666.

* Acrux Testosterone is not yet registered for this indication. # MDTs – Metered Dose Transdermal System

Significant Global Market Opportunity

7

~60m

women in the US estimated to be affected by menopause

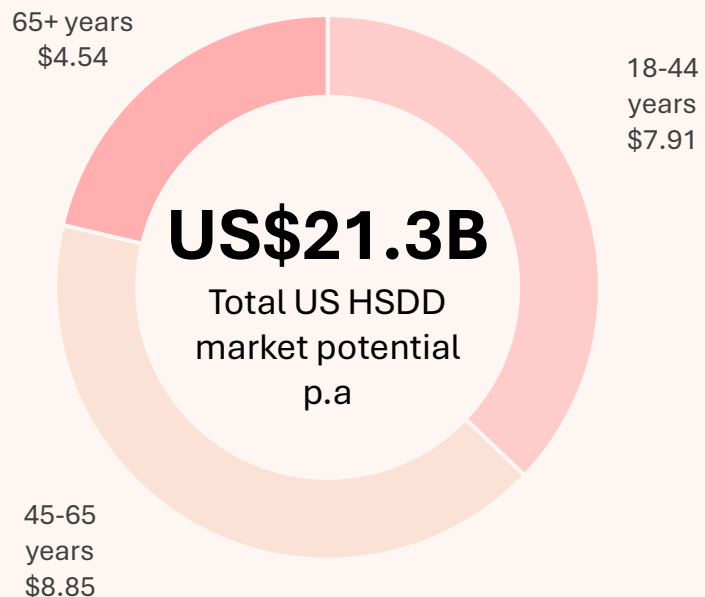

~4.9m

menopausal women estimated with HSDD

~2m

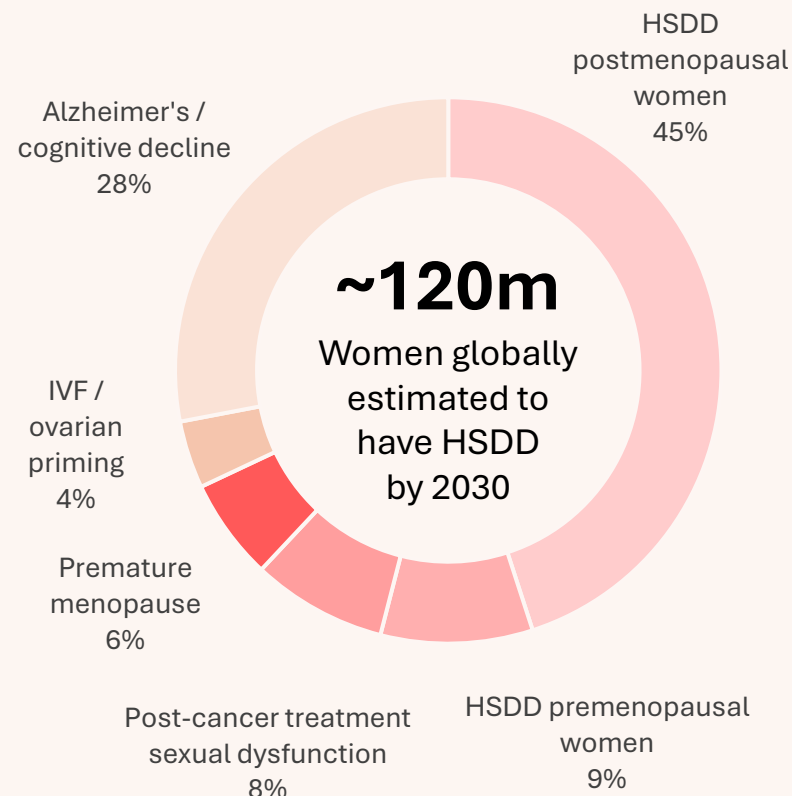

US women are estimated to use off-label testosterone products for HSDD

Estimated US & EU HSDD Market Potential p.a. (US\$B)

Assumptions: 12.3% 45-65y, 8.9% 18-44 y and 7.4% >65 y have HSDD; Cost of annual treatment = \$USD 300 per month; 40% may women respond to treatment/clinically meaningful improvements; and 75% women would speak to doctor & 82% of these initiate discussion with healthcare provider.

Potential Global Population for Female Testosterone*

*There is no known published market report that segments the testosterone market exclusively for women by indication/population. The percentages shown are derived estimates constructed from information, real-world prescribing patterns, epidemiology, and other therapy information. Estimates are intended for strategic and illustrative purposes and are not sourced from a single proprietary market report."

Female Testosterone MDTs

Helping millions of women with
Hypoactive Sexual Desire Disorder (HSDD)

Bioshares Biotech Summit | 6 August 2026

Testosterone: A Transformative Opportunity in Women's Health

9

For personal use only

Core Indication HSDD

HSDD is the primary clinical application for testosterone therapy in women, serving as the foundation of treatment.

Potential beyond HSDD

- **Sexual Health Spectrum**

Testosterone influences multiple aspects of female sexual function including FSAD and orgasmic disorders beyond HSDD.

- **Cognition and Memory**

Emerging research links testosterone to cognitive performance and healthy aging in women.

- **Bone and Musculoskeletal Health**

Testosterone supports skeletal integrity, muscle strength, and physical well-being in women.

Female Testosterone MDTS

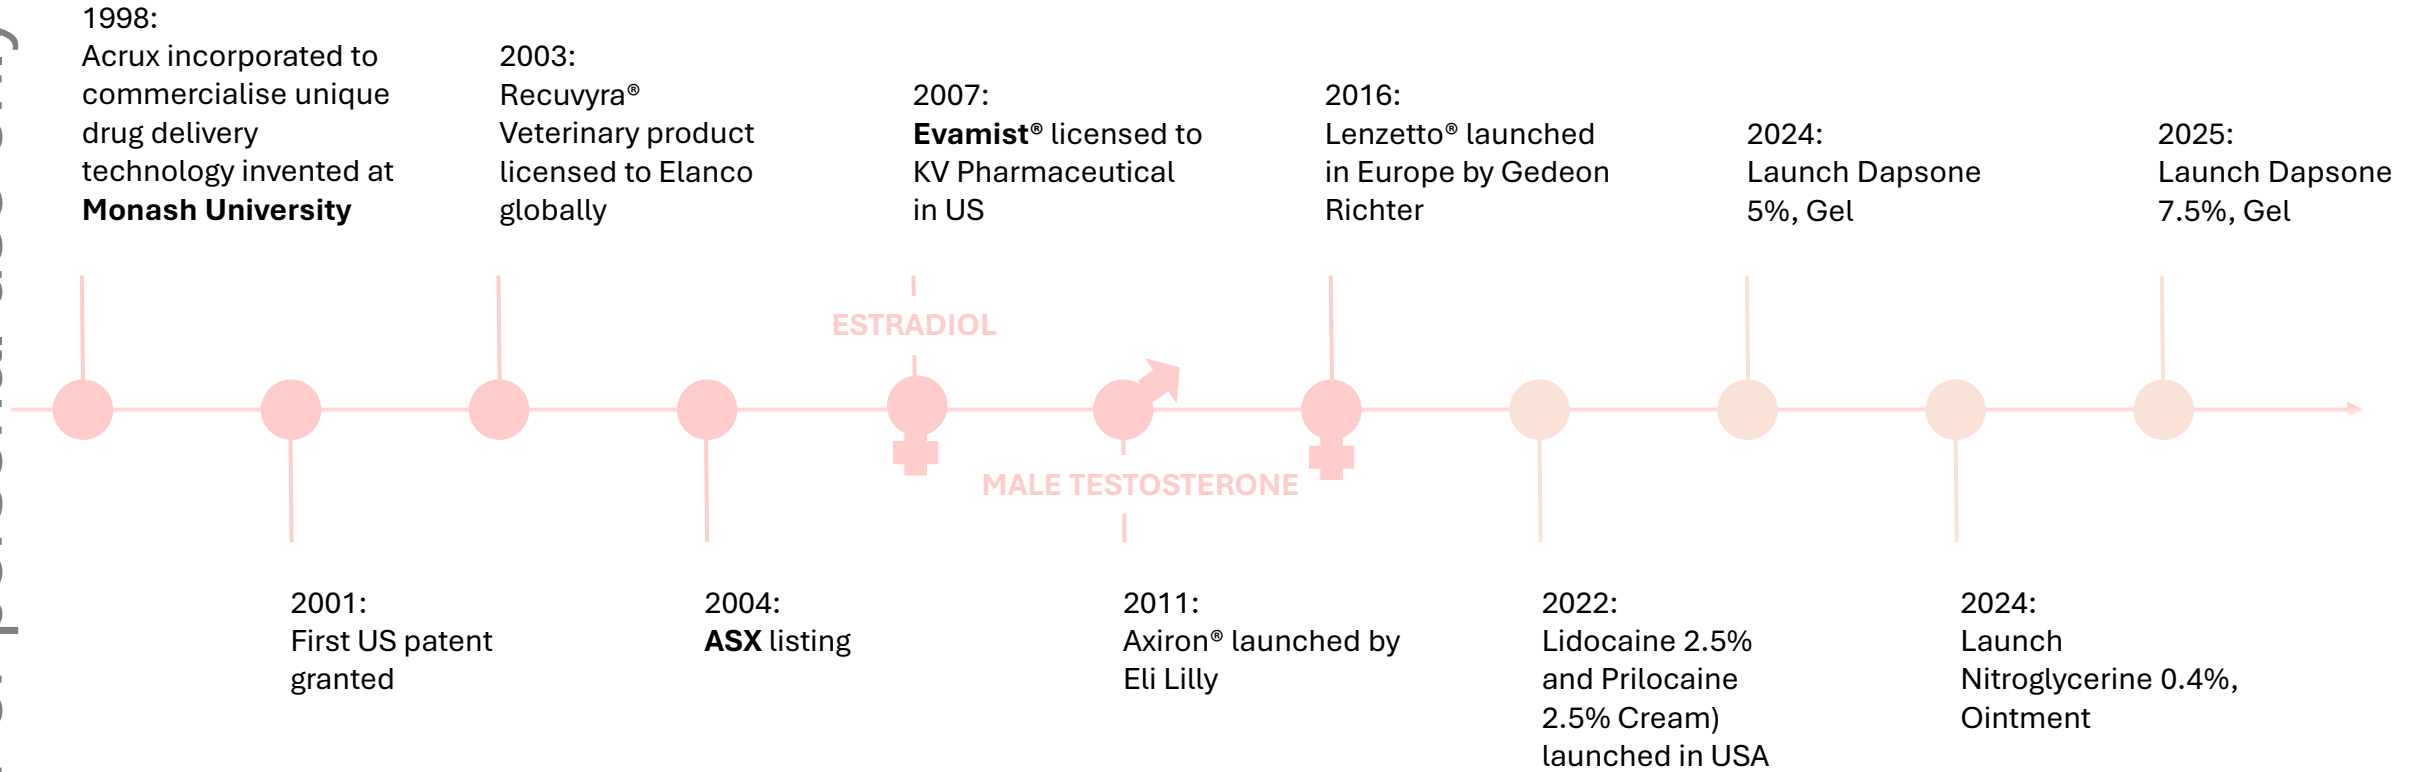

Blockbuster potential

Acrux Ltd (ASX:ACR)

Acrux History

11

For personal use only

Innovative Skin Delivery Technology

Topical Generics

Acrux Proven MDTs Technology

12

No alternative competitor Applicator launched in 18 years

Proprietary MDTs (Metered Dose Transdermal System) Applicator

Delivers a controlled spray of Female Testosterone through the skin

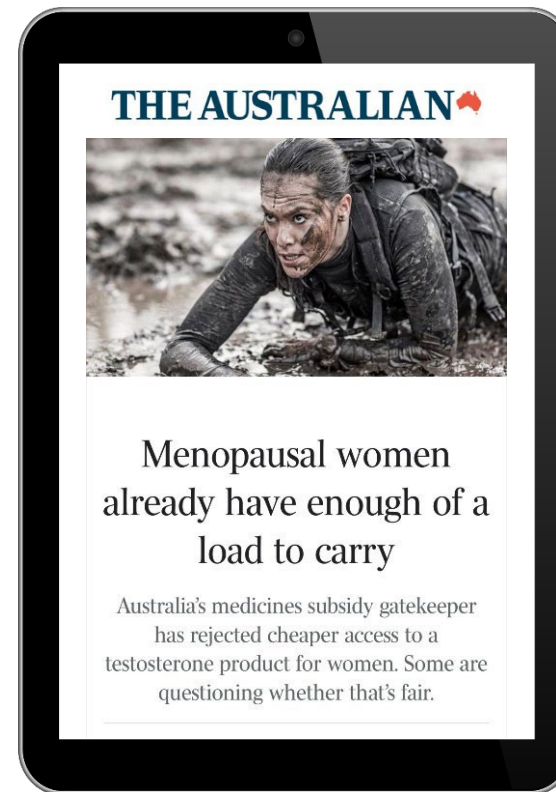

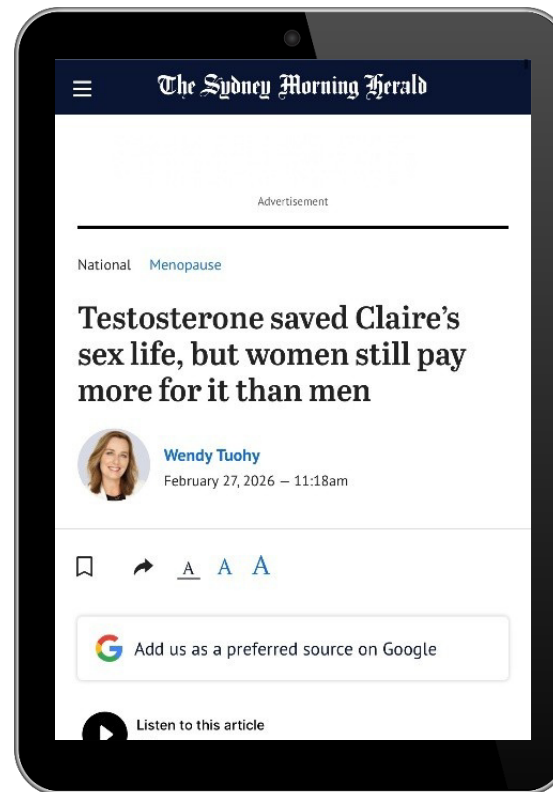

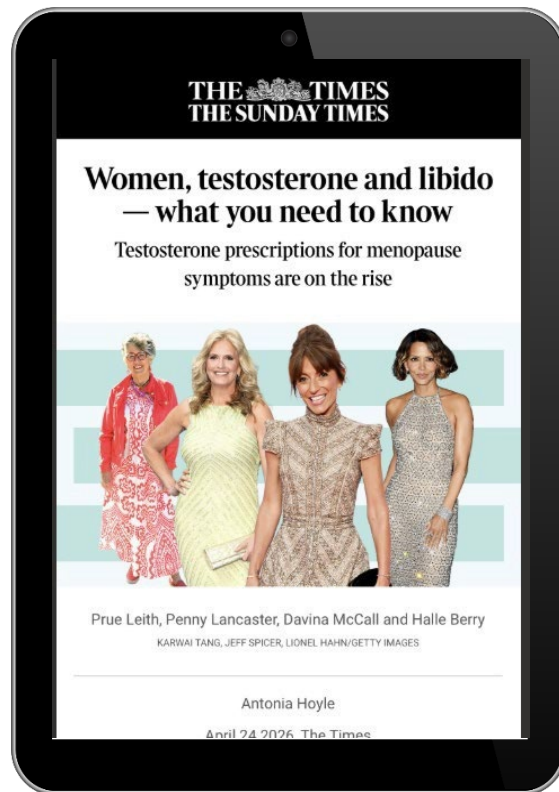

Patchless Patch™ forms an invisible reservoir within the skin

Lenzetto® and Evamist® delivery technology ensures high scalability once in market.

Female Testosterone Awareness

13

Female Testosterone is gaining significant mainstream patient population awareness and traction across key global markets.

Global Positioning of Testosterone Therapy for Women

14

For personal use only

FDA “Black box” warnings:

On hormone therapy products for over 20 years, its strongest caution creating a significant barrier for providers and patients.

Safety & Efficacy :

Inconsistent treatment outcomes and dosing raised risks and patient safety issues.

First evidence-based

guidelines: For testosterone therapy in women worldwide from Global Consensus Position Statement (GCS) in 2019.

GCS noted an unmet medical need for a testosterone transdermal product formulated for female clinical use. **Female Testosterone MDTs® (4.5 mg per spray) has been shown to achieve this clinically.**

Off-Label Prescribing:

Testosterone therapy for women is often based on male formulations and lack standardised dosing.

Regulatory & Research Gaps:

Absence of female-specific products and regulatory clarity hindered pharmaceutical innovation.

Removal of Black box warnings:

FDA with renewed focus on menopause and hormone-therapy policy, seeks to encourage treatments.

Historical Barriers

New Global Pathway

Phase III Study

Development roadmap in place

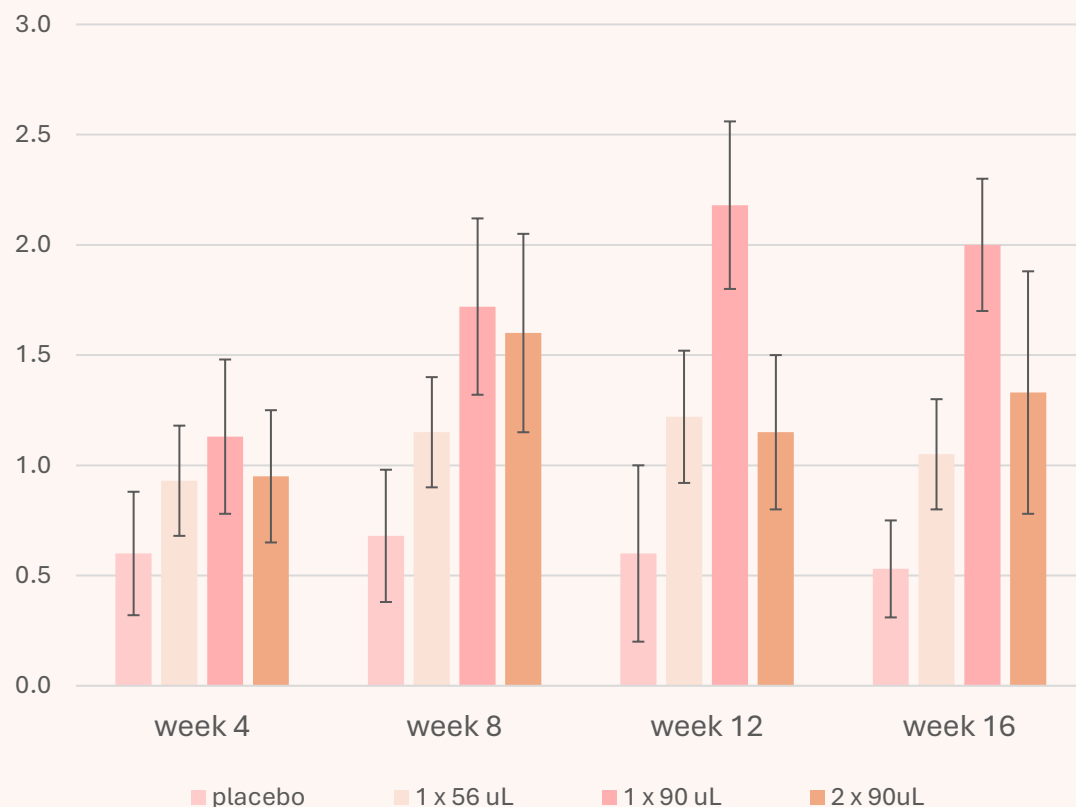

Acrux Ltd (ASX:ACR)

Clear Phase II Results

16

Number of Satisfactory Sexual Events:
Change from Baseline

- Mean number of satisfactory sexual events increased compared to placebo at weeks 4, 8, 12 and 16 for **all of the testosterone groups**.
- Statistically significant increase in the primary endpoint in the 1 × 90 µL testosterone group in the intent-to-treat (ITT) population, with a mean increase of 2.00 satisfactory sexual events at week 16, compared to a mean increase of 0.53 events in the placebo group (the mean baseline frequency in each of these groups was 1.3-1.4).

Phase III Pivotal Clinical Trial Design - A Critical Next Step

For personal use only

FDA Pre-IND recent feedback

FDA Post end-of-Phase-II response received July-2026

Australia

TGA recent feedback

TGA meeting held December-2025

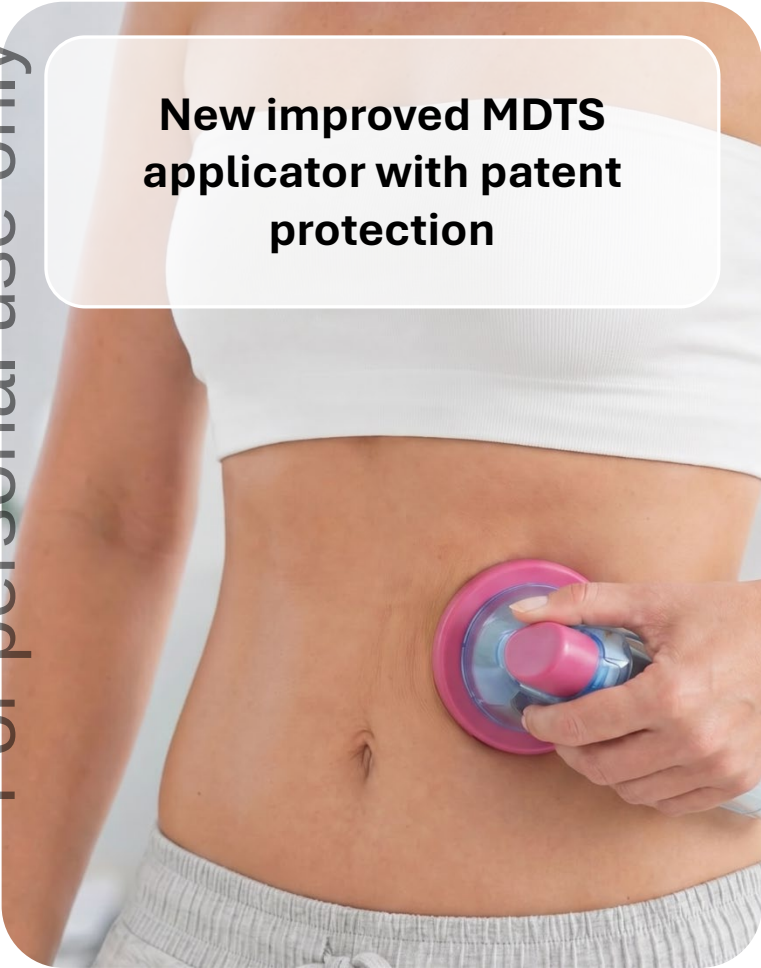

Study Design

Title	A Phase III, Double-Blind, Placebo Controlled Study of the Safety and Efficacy of Testosterone Transdermal Spray for the Treatment of Sexual Dysfunction (Hypoactive Sexual Desire Disorder) in Postmenopausal Women
Co-primary Endpoints	- Sexually Satisfying Events and Sexual Desire Score [Time Frame: baseline through 24 weeks]
Secondary Endpoint	- Female Sexual Distress Score [Time Frame: baseline through 24 weeks]

Lifecycle Strategy for Further Development

18

For personal use only

New improved MDTs applicator with patent protection

MDTs Companion Smartphone App

Expand proposed indication/ population to include:

- Female sexual interest/arousal disorder (FSIAD)
- Female sexual arousal disorder (FSAD)
- Women with premature menopause
- For women post-chemotherapy/ radiotherapy
- Potential as part of IVF treatment
- Cognitive symptoms

Development Roadmap

Close to market - Clear regulatory pathway

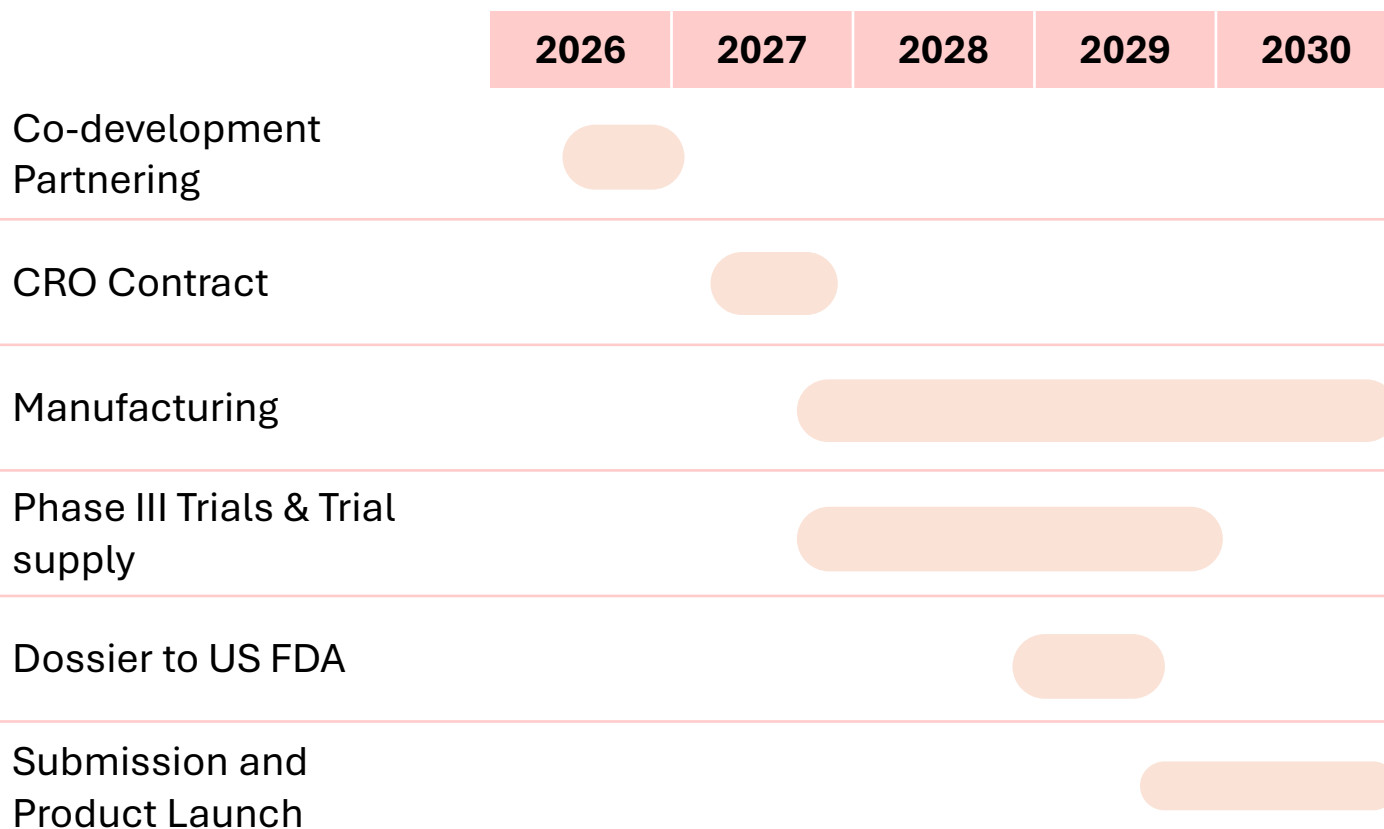

Acrux Ltd (ASX:ACR)

Co-development Roadmap

20

Multiple near-term and medium-term milestones will ensure strong investor engagement and catalysts through to product launch in the US in 2019

- Focus is on progressing potential co-development partnerships in the near-term to de-risk the clinical trial process and expedite market launch.
- Well positioned with existing distribution and product agreements in place with potential co-development partners.
- Strong interest from women's health specialist pharma
- Proactively work with its co-development partner to finalise the Phase III trial design and manufacturing protocols.

**Helping millions
of women with
Hypoactive
Sexual Desire
Disorder (HSDD)**

Phase III stage asset.

Significant, fast-growing market.

Early mover advantage.

Patient preferred application.

Co-development pathway.

Pooled Development Fund

23

Purpose

- Pooled Development Fund Act 1992 was established by the Federal Government
- Increase the supply of capital to Australian small and medium-sized enterprises to enable those businesses to grow and develop their own markets, creating industry and jobs for Australia

Benefits

- ✓ Capital gains made by PDF shareholders are not taxable
- ✓ Shareholders can elect to treat dividends paid by a PDF as tax free
- Capital losses on the sale of PDF's are not deductible

Successful development and FDA registration of topical pharmaceuticals generates core Acrux income

24

FDA registered products commercialised in the US

- Nitroglycerin 0.4% ointment launched.
- Dapsone 5.0% gel launched.
- Dapsone 7.5% gel launched.
- Evamist® royalties continue.

Geographic expansion of FDA registered products

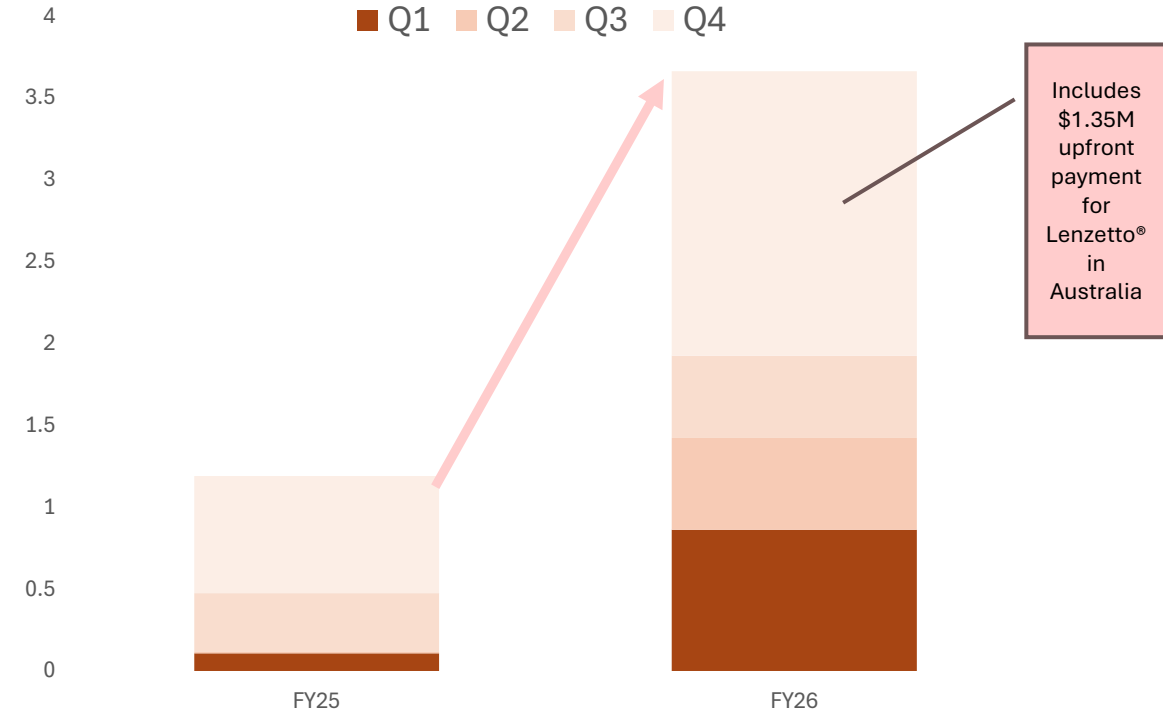

Further Female HRT licensing expansion

Unprofitable assets removed from portfolio

Realisation of generic pipeline via partnerships

- Ophthalmic, Otic, and Topical.

License revenues from Generic portfolio
